

Kolb's Learning Cycle

- As educators we should be aware of our own preferred learning styles and consider framing our teaching around the entire learning cycle.
- Standards for predictive validity of LSI need to be clarified in terms of notion of 'acceptable' and in terms of proved (tried and tested) learning styles.
- Learning styles are individualised but 'ever-changing'
- Identifying preferred learning style can alert students to need to engage with remaining learning styles to complete cycle for effective experiential learning.
- You may need a mentor.
